***Reasons for Allowance***

1. Claims 13-31 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The cited art taken alone or in combination fails to teach the claims invention of an expert system embodied in programmatic rules representing knowledge of experts in the field of user interface design developed from appropriate guidelines, conventions and principles. Such expert system receives programmer intentions embodied in an application and creates substantiations that are returned to the application where the selected user interface controls the interaction with the user via an output device.

The closest prior art (Bennett et al, Teleporting – Making Applications Mobile) teaches that within the X Windows System, users interact with their existing X applications at any X display within a building. The main component of the teleporting system is a special X server, known as a proxy server where chosen applications are made mobile by running them as clients of the proxy server. The proxy server does not have a display, but it makes use of a display of some real X server. The proxy server makes its clients mobile because it is able, upon request, to breakdown its connections with any real X Server and, if desired, rebuild them with another. The proxy server, while programmed in accordance with X Consortium protocol, is similar in functionality to the applicants expert system. However, Bennett, in the teaching of the proxy server, does not teach generating user interface instructions from a template represented by a rule that has been selected from a code module configured from one intention and an associate set of parameters.
